[1] This example assumes that the Preferred converts into Common Stock at a 1:1 ratio. If the Preferred converts into Common Stock at anything other than a 1:1 ratio, then the Preferred columns should be expanded into a "nominal shares" column and an as-converted shares column and all calculations in which the Preferred shares are combined with the shares of any other class or series (e.g., the "Total Shares" calculation) should draw on the as-converted shares.
